

# Gasser Chair's Green Initiative

In an ongoing effort to provide a greener product, yet continue to provide a quality product that Gasser Chair is known for, we are taking the following measures to reduce our environmental footprint:

- Upon delivery of new seating products, Gasser offers to take back existing, used seating products manufactured by Gasser to be **refurbished** or properly recycled. The advantages of selecting factory refurbished seating has been compelling for many customers.
- Gasser actively seeks to reduce packaging entering the waste stream by shipping products with reusable materials and recycling same at the end of their useful life.
- Gasser has established company wide recycling programs which include aluminum, steel, polyurethane, cardboard, paper, plastic, printer toner cartridges, batteries, cell phones and glass.
- Gasser offers upholstery with recycled content.
- Gasser offers environmentally friendly finishes on their wood products and powdercoated finish products (no VOC's).
- Gasser employs local vendors whenever possible to reduce transportation and therefore harmful emissions.
- Production Facility
  - recycles solvents that are then repurposed
  - recycles wood off-fall as landscaping material for Gasser facilities
  - uses an electronically controlled ventilation system to reduce energy consumption and to improve comfort.
  - uses improved lighting through the utilization of energy efficient fixtures
  - uses a negative ion generator to eliminate fumes in the welding area
  - uses energy efficient radiant heating in many production areas
